What is Git?

Git vs. Github

• Git

- version control software on your computer;
- o stuff you do on your command line.

Github

- website that hosts git repositories and adds a few more features;
- o stuff you do on github.com.

How to create a Git repository

- There are two ways:
 - by using git init inside a folder on your computer;
 - o by cloning (copying) a repository from github using git clone.

- Golden rule:
 - ALWAYS make sure you are not inside a git repository when you create a new one.
 - you can check by typing git status on your command line, if you get an error it means you are not inside a git repository and you can create a new one.

The commit

- To commit our changes is to save our changes in the git repository history.
- A commit represents a unit of work, like writing a paragraph in our Google Doc.

How to commit/save your changes

- Two steps:
 - o git add
 - where you say which changes you want to save;
 - o git commit
 - where you actually save your changes and give them a label.
- It's a bit like going to the supermarket:
 - first you add products (files) to your basket
 - at the end you pay (commit)

But, what is really a commit?

- A commit contains:
 - o a snapshot of the entire repository;
 - who made the changes;
 - when the changes were made;
 - o a (meaningful!) label describing the commit;
 - o a pointer to the previous commit.
- All this is converted into a unique hash key, e.g. ee2371b.

Github

Workspace

Your filesystem, your folders, files, etc.

Where changes are made.

Staging/index

Snapshot of the changes you want to commit (in the current branch).

Local

Your local repository.

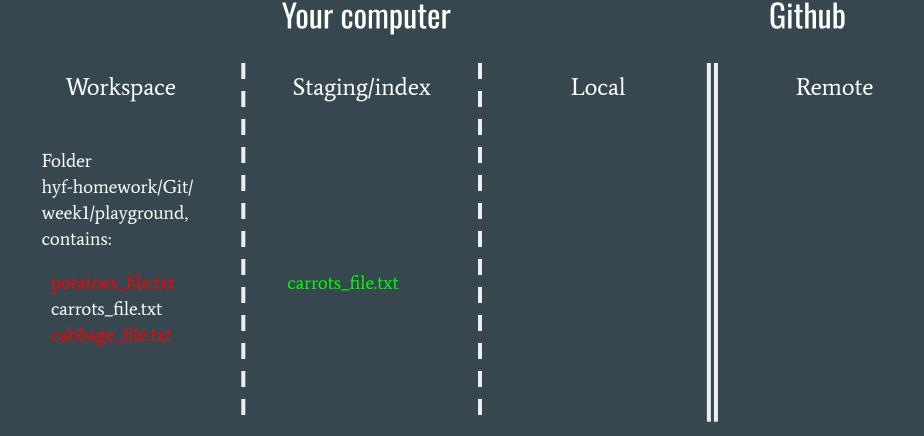

Lives in a .git folder.

Contains the entire history of the repository.

Remote

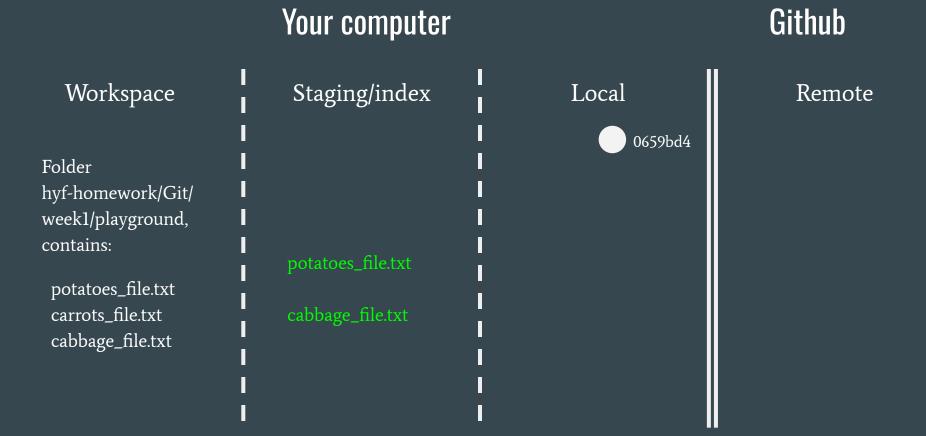

Central server where git repositories can be stored.

Branches in Git

- You create a branch with:
- You move to a different branch with:
 - o git checkout
branch_name>
- You delete a branch with:
 - o git branch -d <branch_name>
- Your files/modifications only belong to a specific branch after you commit in that branch.
